## ABOUT THE HAPPINESS INDEX

The happiness Index survey is an indexation of happiness based on results first used in the 2012 World Happiness Report. In the survey, the respondents are asked to rate their happiness on a given scale. The definition of the Happiness Index originates from the Bhutanese Gross National Happiness Index. In 1972, Bhutan started prioritizing happiness over other factors such as wealth, comfort, and economic growth. They created an indexation for happiness based on multiple measurable factors, and have kept track of this index ever since.

Adhering to the academic lifestyle of students of Assam, the factors measured are

As an adolescent who is on the journey of accomplishing the teenage phase, every student belonging to high school faces a lot of challenges that create a direct impact on their professional careers. These challenges if left unanswered leave the child in an immovable condition throughout life. The importance of mental health is now understood on the global level and the assistance of the experts in addressing the individual issues has been creating miracles across the globe.

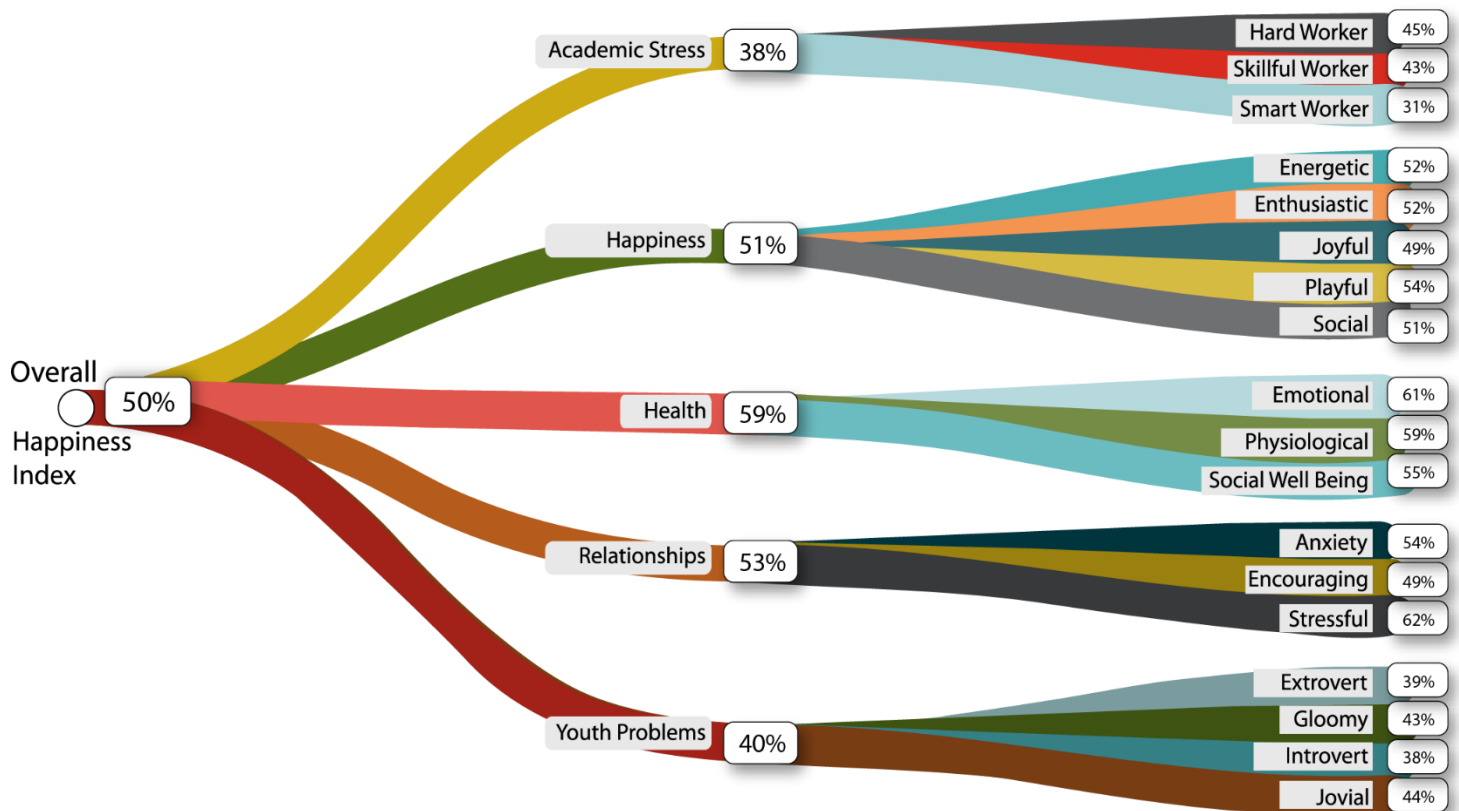

In order to extend support to the students for their flourishing future, it is highly essential to understand the areas where the child is finding it difficult to overcome the roadblocks. As a part of this process, a survey is held across the schools of **BAKSA** district, of Assam.

For a child to transform into a complete individual, it is crucial that all the elements of life including professional, academic, interpersonal, and social fronts give them a sense of fulfillment. Targeting these core areas, the happiness index survey majorly focuses on the categorized areas at a deeper level through a series of questions. The subcategories of the aforementioned include,

|                  |                                                  |
|------------------|--------------------------------------------------|
| Academic Stress- | Hard worker, Smart worker, Skillful worker       |
| Happiness-       | Joyful, enthusiastic, Energetic, Playful, Social |
| Health-          | Emotional, Physiological, Social Wellbeing.      |
| Relationship-    | Extrovert, Introvert, Jovial, Gloomy             |
| Youth Problems-  | Encouraging, stressful, anxiety                  |

## BAKSA DISTRICT REPORT:

With the happiness index surveyed across the district, the reports calculated show the levels of each factor, displayed as an average of all the responses.

\* The happiness index framework is inspired by the Oxford happiness inventory which has proven its authenticity in terms of internal reliability, construct, and concurrent validity.

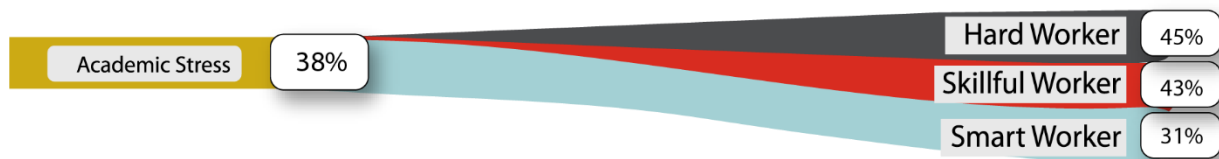

Sample Set: 427

No of Schools: 198 Schools

## ACADEMIC STRESS

## Academic Stress

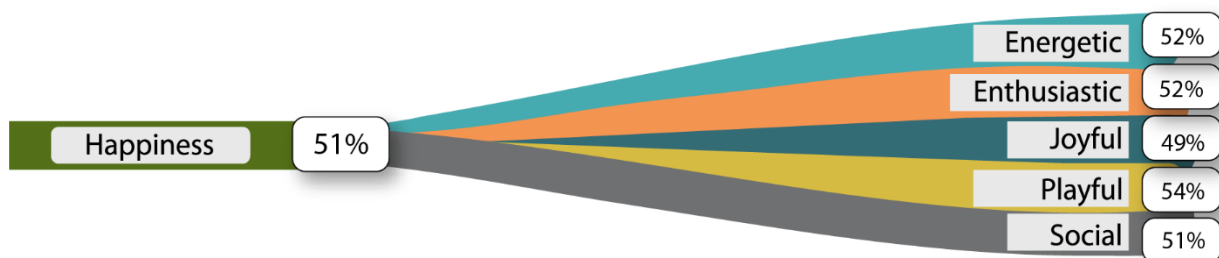

Academic Stress and its sub-categories measured across the responses received are as above. Reports show that increased levels of academic stress can result in utmost prevalence of psychological and physical problems that effect not just their academic results but also the personal life. Research also that anxiety caused due to academic stress as a disorder is seen in about 8% of adolescents and children worldwide.

## HAPPINESS

## Happiness

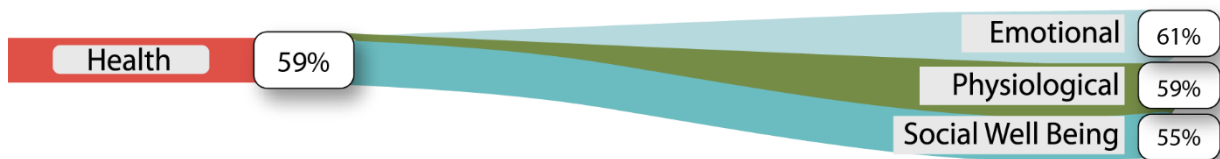

Happiness meter indicates the student's responses to each sub-category, which are calculated and analyzed for better understanding. Considering the investigation held around the globe, research proves that happiness is positively correlated with motivation and academic achievement. Few vital factors impacting the above results of student happiness include creating strong relationships with teachers and peers.

## HEALTH

## Health

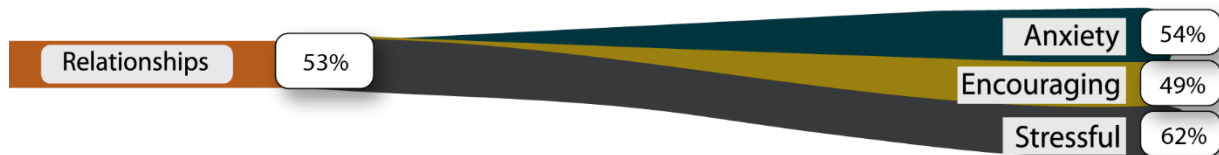

As the principle of physical wellness and its correlation with mental health is now aware on a larger scale, the students' health is analyzed to understand the traits that affect their happiness.

## RELATIONSHIP

## Relationships

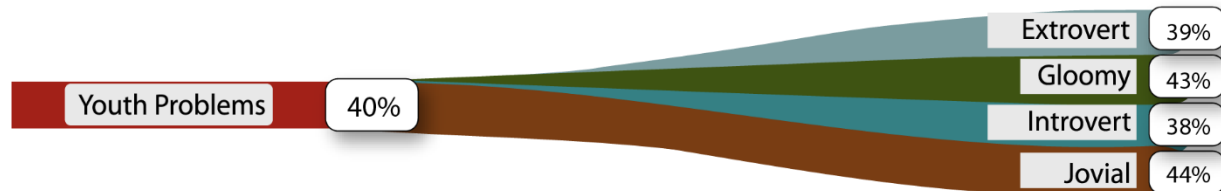

The relationships of students, which are directly linked to their psychological behavior which is affecting their happiness levels can be understood by the report above.

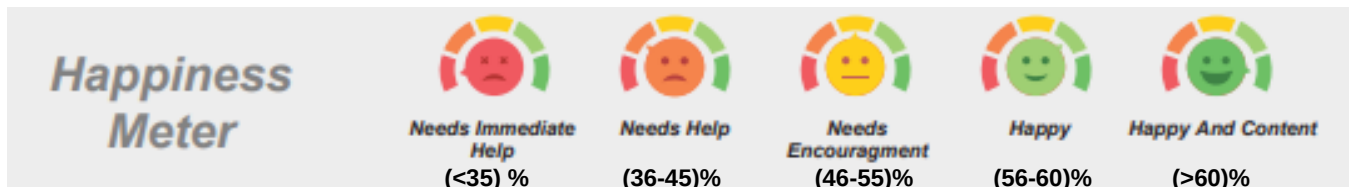

## YOUTH PROBLEMS

## Youth Problems

The youth problems impact adolescents and teens in an undefined manner. These challenges impact the students' overall performance and characteristic traits. Though these problems might seem negligible to a normal audience, the existential phase of adolescence leaves a deeper imprint on the students' lives.

## The HAPPINESS METER and its measurement:

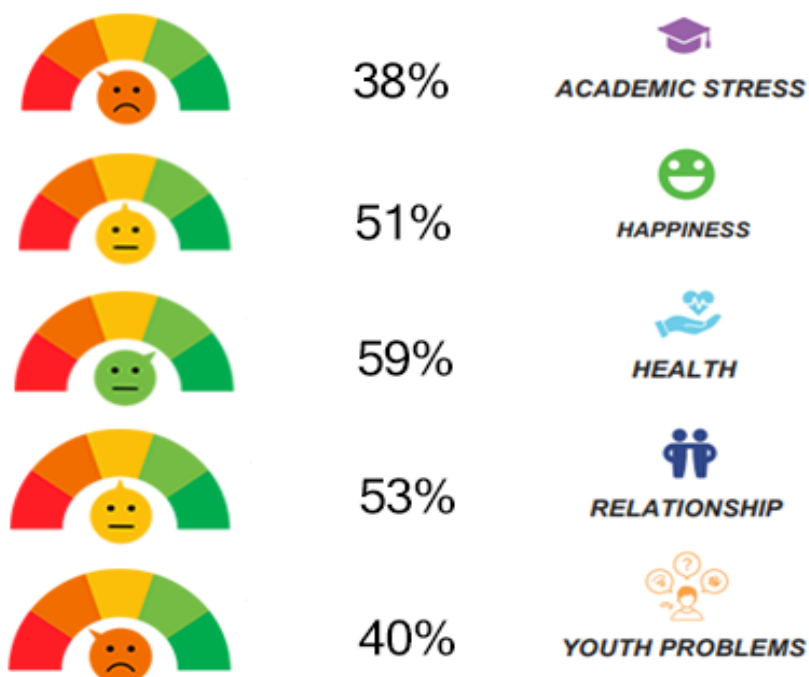

Post survey, the happiness index is calculated using data analysis of the responses to each question given by the students. Depending on the scores generated, the happiness index is gauged and displayed through the happiness meter.

Understanding that the performance of the students is directly related to their mental ability in perceiving the situations mentioned in the questions of the survey, the happiness meter depicts their standards. The happiness score ranges from "Needs immediate help" to "Happy and content", giving a clear picture of the Child's happiness levels.

The segregation into 5 levels portrays the intensity of support to be delivered to the child in order to nourish and nurture their overall development.

## Key Findings

A challenging year for student happiness in Assam: Students were unhappy during the 2021/22 academic year run amidst COVID, as evidenced by an overall score of 50% on the Happiness Index meter.

From the Above Happiness Index Meter Indicators, we find that:

Students **Need help** in dealing with Academic Stress and Youth Problems. Ensuring that they receive adequate assistance in working on how to work smart besides their hard work helps them relieve the stress from academic life. Exposing them to multifarious activities that involve their physical presence and mental presence gives them a total understanding of fellow youth and the intricacies involved of the prime stage and how to deal with them.

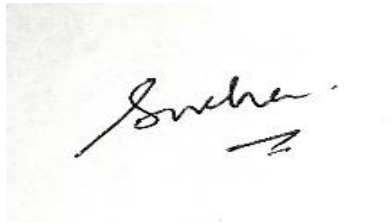

**Needs Encouragement** in Relationships and Happiness related areas. Ensuring that students live in most joyful environments that also enrich their relationships in an encouraging tone enhances the students' approach towards relationships and happiness. The reports infer that student reveal their health keeps them **Happy** at the moment that has positive impact towards their academics. Keeping up their physiological and social well-being creates them a better world of health.

## Support extended to keep up the happiness of the district

Followed by the results of the happiness index survey, the overall happiness of the students of **BAKSA** district is on an appreciable level. The expert assistance extended to students based on the obtained results shall build the confidence in the students. This further helps the students to achieve unbounded success in their lives.

With the sudden pandemic outbreak, there is a possibility of students entering into a shell environment. When many uncertainties have started to encounter, there is a likely chance of students getting adversely affected not just physically but also psychologically. As the in-person mode of learning has resumed, it is anticipated that this switch in the pattern will help students to leave their fears behind, mingle with peers, and participate in healthy competition. This shall ensure the growth graph sees a peak in the coming days.

Apart from parents and relatives at home, the quintessential people of a child's life are the teachers at school. Besides getting inspired by teachers, research proves that students also expect a warm and welcoming environment from their mentors. As teachers are the ones who provide the students with the requisite knowledge of academics, it will keep the students intact with their lives through the emotional support extended by their teachers.
